

# Equine Arthritis

## A Joint Approach

Arthritis can affect horses of any age - the key to successful treatment is early diagnosis and effective control to extend the active life of your horse.

### What are the symptoms of Arthritis?

- Behavioural change e.g not wanting to jump.
- Stumbling and tripping.
- Abnormal shoe wear.
- Increased time to warm up.
- Decreased performance.
- Warm, stiff, swollen or painful joints.
- Lameness.

If you recognise any of these symptoms in your horse, speak to your vet.
